

FRAME × FRAME ACADEMY

Type-to-Video Starter Kit

Make animated video by typing a sentence. Claude + Remotion.

WHAT YOU NEED

- Claude Code (the agent).
- Node installed.
- Remotion (one install command).

THE 4 STEPS

1. Install Remotion in a folder.
2. Open Claude Code in that folder.
3. Type what you want: 'lyric video, black bg, orange text, beat-synced to this audio.'
4. Claude writes the code + renders the MP4. Iterate by chatting.

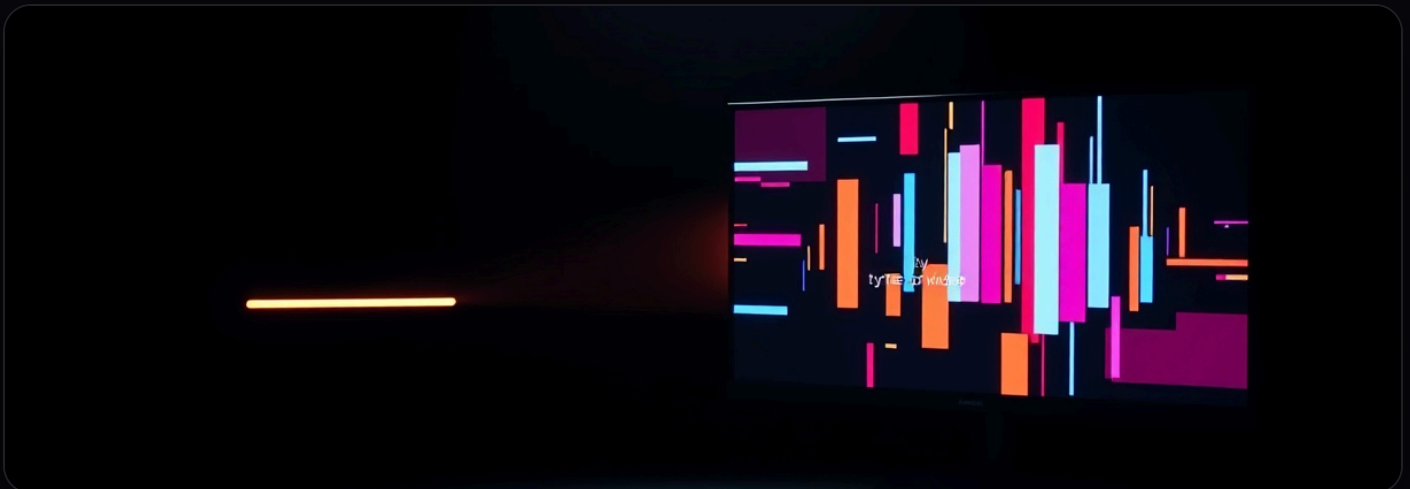

FIG 01

THE PIPELINE — one typed sentence goes in, Claude writes the Remotion code, a rendered MP4 comes out.

WHAT TO MAKE FIRST

- Lesson intro card.
- Lyric / quote video.
- Data-viz or stat animation.
- Logo sting.

THE MINDSET

- You're not animating. You're DIRECTING. The machine does the timeline; you do the taste.

FIG 02 THE MINDSET — you conduct, the machine keyframes. Direction is the job; the timeline is automated.

► **First render in under 10 minutes. Drop it in the Discord.**
